

Abstract

The present invention relates to a pharmaceutical formulation for the funnelling of nucleic acids into
5 eukaryotic cells, characterised in that the formulation has a pH-value within the range of pH 6.0 to pH 7.4, and/or an anion concentration within the range from 5 to 100 mmol/l and/or provides nonsteroidal anti-inflammatory drugs with a concentration within the range from 10 to
10 500 μ mol/l.
